 Q4 CRM

Recent releases @ SynQues

*At SynQues, we focus on the **quality of implementation** that we are delivering to our clients.*

We are working towards transforming the way customers are managed by our +600 existing business clients worldwide. Our NEW product for Customer Relationship Management (**Q4 CRM**) has been widely accepted and is enabling valuable addition to the existing business communication.

In addition to that, we are very excited to offer the possibility of enabling our clients in selecting the right candidates based on the behavioural job descriptions given by their own job-related-stakeholders. Online Mass Selection Tool (**Q4 MST**) enables our clients to not only measure the gaps in the existing behavioural energies of the organisation, but also creates awareness and productive communication between various departments in the organisation. It also helps in solving succession issues.

Research & Design @ SynQues

Currently, our R&D team is focusing on developing our new business line. For large infrastructure, our technology can provide safety, security & surveillance as a by product. The technology can reduce operations and maintenance costs to a fraction of the existing costs. The product is due to be released by the end of 2020.

Q4 Safety
 Vigilance | Alert | Proact | Normalize

Services @ SynQues

We have successfully covered 10 years of meeting dutch quality expectations. Our team is travelled, exposed and equipped to technically understand & participate at all levels with our client's needs and concerns. We **develop, customise and/or maintain** high-end-technology for our customers. We believe in our talent and are attuned to meet your pace.
